## EDUCATION

**B.Tech – Computer Science and Engineering** | ABES Engineering College, Ghaziabad

2024 – 2028

CGPA: 8.33

**Class 12 – CBSE** | Sunder Deep World School, Ghaziabad

2024

Score: 85%

**Class 10 – CBSE** | Sunder Deep World School, Ghaziabad

2022

Score: 88.5%

## EXPERIENCE

**IBM Internship (Project-Based)**

June 2026-Aug 2026

<https://github.com/tanmaygarg06/SecureDoc>

- Learned Kubernetes, Docker fundamentals including creating containers to orchestrate workloads.
- Architected a secure cloud file storage system on AWS S3 and IAM, storing user and file metadata as JSON to eliminate a separate database.
- Followed Agile methodology and software development lifecycle (SDLC) best practices, applying Git and GitHub for version control throughout the internship project.
- Implemented JWT-based authentication and password hashing for secure user sign-up and sign-in.
- Designed a least-privilege IAM policy restricting backend access to a single S3 bucket, minimizing risk in case of credential compromise.
- Streamlined code integration and deployment checks using GitHub Actions to catch errors early in the project.
- Developed file and folder management features (upload, download, delete, recursive folder deletion) using AWS SDK commands for S3.
- Configured CORS policies on the S3 bucket to enable secure cross-origin requests from the frontend.

## PROJECTS

**Vibe -Check Dashboard – AWS, Python, JavaScript**

Feb 2026

<https://github.com/tanmaygarg06/VibeCheck>

- Engineered a sentiment analysis API classifying text into 8 emotions with ~500ms latency via AWS Lambda and API Gateway.
- Designed a serverless backend handling 1,000+ requests/min at ~\$0.01 per 1,000 calls, eliminating server costs.
- Engineered a DynamoDB schema with composite keys to track per-user emotion history across sessions.
- Enforced API security via key-based authentication, rate limiting, and CORS policies blocking unauthorized access.
- Integrated Amazon Bedrock (pre-trained models, faster iteration) to fine-tune models for emotion classification.

**Real-Time Stock Analyzer – AWS, Power BI**

Jan 2026

<https://github.com/tanmaygarg06/Real-Time-Stock-Dashboard>

- Developed a scheduled AWS Lambda pipeline ingesting time-series price data for 8+ stocks into DynamoDB.
- Connected a Power BI dashboard with 5-minute refresh cycles to deliver near-real-time price trends.
- Secured the dashboard with Amazon Cognito user pools to prevent unauthorized market data access.
- Modeled DynamoDB with time-series partitioning for fast multi-symbol historical price lookups.
- Enforced least-privilege access across Lambda (Serverless Architecture), DynamoDB, and S3 using fine-grained IAM roles and policies.

## CERTIFICATIONS

**AWS Certified Solution Architect (Scheduled in 2026)**

2026

**AWS Certified Cloud Practitioner (Validate)**

2026

**AWS Academy Graduate Cloud Architecting (Validate)**

2026

**AWS Academy Graduate Cloud Foundations (Validate)**

2025

**IOT and Industry (4.0) NPTEL**

## SKILLS & PROFILES

---

**Programming Languages:** Java, Python, C, HTML, CSS, JavaScript

**Cloud – AWS:** Lambda, API Gateway, DynamoDB, S3, Cognito, Bedrock, Event-Bridge, IAM, CloudWatch

**Tools:** Git, GitHub-Actions, VS Code, Power BI, Docker, Serverless Architecture, REST APIs

**Coding Profiles:** [LeetCode](#) | [CodeChef](#) | [Codeforces](#)

## ACHIEVEMENTS

---

- Led competitive programming and peer-learning initiatives as a CodeChef Club member, organizing monthly contests and code-review sessions.
- Solved 200+ data structures and algorithms problems on LeetCode covering arrays, strings, and recursion, ranking in the top percentile among peers.
- Planned, built, and deployed two production-grade AWS cloud projects within two months using Python, JavaScript, and serverless architecture, each live and publicly accessible on GitHub.
- Practiced version control and collaborative development workflows using Git and GitHub across all personal and academic projects.
